Foundations

Foundations

- API First
- HTTP, Web, & REST

What is API-First?

"API-first design means identifying and/or defining key actors and personas, determining what those actors and personas expect to be able to do with APIs"

-- Kas Thomas, 2009

Foundations

History

Company Story at BigCo, Inc.

Purpose

We keep track of companies for BigCo, Inc.

Data

Data we include in a company record includes company name, street address, city, state/province, postal code, country, telephone, and email. Each record has a status value (pending, suspended, active, closed). We also track the date/time the record was created and the last date/time it was updated. We keep copies of the records, even after they have been deleted.

Actions

Typical work on the company records include getting the list of company records, reading a single record, creating, updating, and deleting records. You can also update the status of a single record. Finally, you can get a filtered list of all records (support for filtering by status, by country, by state, and by company name).

Processing

Each company has a unique identifier in the system. Right now that is a combination of the first four letters of their company name and date the company was added to the system (in the format YYYYMMDD. We add another digit if adding that does not result in a unique identifier in the system.

Building APIs

- Sketching
- Prototyping
- Building
 - Repeatable process
 - Convert prototype/design into code
 - DARRT
 - Data, Actions, Resources, Representations, Transitions

Building APIs : DARRT

A simple, repeatable process for publishing API interfaces

- Data
- Actions
- Resources
- Representations
- Transitions

Building APIs : DARRT : Data

- The state properties to pass in messages
 - `properties`, `requires`, `enums`, `defaults`

```
// this service's message properties  
exports.props = [  
  'id', 'status', 'dateCreated', 'dateUpdated',  
  
  'companyId', 'companyName', 'streetAddress', 'city', 'stateProvince',  
  'postalCode', 'country', 'telephone', 'email',  
  
  'accountId', 'division', 'spendingLimit', 'discountPercentage',  
  
  'activityId', 'activityType', 'dateScheduled', 'notes'  
];
```

Building APIs : DARRT : Data

- The state properties to pass in messages
 - properties, requires, enums, defaults

```
// this service's message properties  
// required properties  
exports.reqd = ['id', 'status', 'created', 'dateUpdated',  
  'companyId', 'companyName', 'streetAddress', 'city', 'stateProvince',  
  'postalCode', 'country', 'telephone', 'email',  
  'accountId', 'division', 'spendingLimit', 'discountPercentage',  
  'activityId', 'activityType', 'dateScheduled', 'notes'  
];
```

Building APIs : DARRT : Data

- The state properties to pass in messages
 - properties, requires, enums, defaults

```
// this service's message properties  
// required properties  
exports.reqd = ['id', 'status', 'created', 'dateUpdated',  
  'companyId',  
  'postalCode',  
  'accountId',  
  'activityId'  
];  
// enumerated properties  
exports.enums = [  
  {status:  
    ['pending', 'active', 'suspended', 'closed']  
  },  
  {division:  
    ['DryGoods', 'Hardware', 'Software', 'Grocery', 'Pharmacy', 'Military']  
  },  
  {activityType:  
    ['email', 'inperson', 'phone', 'letter']  
  }  
];
```

Building APIs : DARRT : Data

- The state properties to pass in messages
 - `properties`, `requires`, `enums`, `defs`

```
// this service's message properties
```

```
// required properties
```

```
exports.reqd = ['id', 'status', 'created', 'dateUpdated',
```

```
  'companyId',  
  'postalCode',  
  'accountId',  
  'activityId'  
];
```

```
// enumerated properties
```

```
exports.enums = [  
  {status:  
    ['pending', 'active', 'suspended']  
  },  
  {division:  
    ['DryGoods', 'Hardware', 'Software', 'Grocery', 'Pharmacy', 'Military']  
  },  
  {activityType:  
    ['email', 'inperson', 'phone', 'letter']  
  }  
];
```

```
{name:"spendingLimit", value:"10000"},  
{name:"discountPercentage", value:"10"},  
{name:"activityType", value:"email"},  
{name:"status",value:"pending"}  
];
```

Building APIs : DARRT : Actions

- The actual internal operations for the interface
 - `approvePayroll`, `updateCustomer`, `setStatus`

`building/action-readStatus.js`

```
module.exports.readStatus = function(req,res) {
  return new Promise(function(resolve,reject){
    if(req.params.id && req.params.id!==null) {
      var id = req.params.id;
      var fields="id, status, dateCreated, dateUpdated"
      resolve(
        component(
          {name:'onboarding',action:'item',id:id, fields:fields}
        )
      );
    }
    else {
      reject({error:"missing id"});
    }
  });
}
```

Building APIs : DARRT : Resources

- The public HTTP resources to access the operations

building/resource-list.js

```
// *****  
// public resources for the onboarding service  
// *****  
  
router.get('/', function(req, res){ });  
router.post('/wip/', function(req, res){ });  
router.get('/wip/', function(req, res){ });  
router.get('/wip/filter/', function(req, res){ });  
router.get('/wip/:id', function(req, res){ });  
router.get('/wip/:id/company', function(req, res){ });  
router.put('/wip/:id/company', function(req, res){ });  
router.get('/wip/:id/account', function(req, res){ });  
router.put('/wip/:id/account', function(req, res){ });  
router.get('/wip/:id/activity', function(req, res){ });  
router.put('/wip/:id/activity', function(req, res){ });  
router.get('/wip/:id/status', function(req, res){ });  
router.put('/wip/:id/status', function(req, res){ });
```

Building APIs : DARRT : Representations

- Produce the requested format for resource responses

```
building/app-json-template.js
// plain JSON rerpresentor template
exports.template =
{
  format:"application/json",
  view:
  `
  {
    "<%=type%>":
    [
      <%=var x=0;%>
      <%=rtn.forEach(function(item){%>
        <%=if(x!==0){%>,<%=}%>
        {
          <%=var y=0;%>
          <%=for(var p in item){%>
            <%=if(y!==0){%>,<%=}%>
            "<%=p%>": "<%=helpers.stateValue(item[p],item,request,item[p])%>"
          <%=y=1;%>
          <%=}%>
        }
      <%=x=1;%>
    <%=}%>
  ]
  <%=}%>
  `
}
```

Building APIs : DARRT : Transitions

- The list of public actions as expressed in HTTP

building/add-account-transition.js

```
{
  id:"addAccount_{id}",
  name:"addAccount",
  href:"{fullhost}/wip/{id}/account",
  rel: "item edit-form onboarding",
  tags: "onboarding list item",
  title: "Add Account",
  method: "PUT",
  properties: [
    {name:"accountId",value:"{accountId}"},
    {name:"division",value:"{division}"},
    {name:"spendingLimit",value:"{spendingLimit}"},
    {name:"discountPercentage",value:"{discountPercentage}"}
  ]
}
```

Releasing APIs

- Testing

- Test interface and behavior
- Postman/Newman

- Security

- APIs use client_credentials w/ JWTs
- Auth0 as a provider

- Deployment

- Automate for safety
- Heroku git push

The screenshot shows a Postman interface with a collection named 'BigCo Company API' containing 15 requests. A diagram overlaid on the interface illustrates the OAuth2 flow: 1. CLIENT APP requests a token from OAUTH. 2. CLIENT APP returns the token. 3. CLIENT APP requests a resource with the token, and the server returns the resource. The terminal window shows the following output:

```
Deploying to production...
Everything up-to-date
Running post-deployment tests...

Modifying APIs

- Update Principles
- Design Updates
- Test Updates
- Release Updates
- API Shutdown

Modifying APIs

- Update Principles
 - First, do no harm
 - Fork your API
 - Know when to say "No"
- Design Updates
- Test Updates
- Release Updates
- API Shutdown

Modifying APIs

- Update Principles
- Design Updates
 - Take nothing away
 - Don't redefine
 - Additions are optional
- Test Updates
- Release Updates
- API Shutdown

Modifying APIs

- Update Principles
- Design Updates
- Test Updates
 - Use all existing tests
 - Add new tests for each release
- Release Updates
- API Shutdown

Modifying APIs

- Update Principles
- Design Updates
- Test Updates
- Release Updates
 - Reversibility/Re-entry First
 - Side-by-Side Releases
 - Overwriting Releases
- API Shutdown

Modifying APIs

- Update Principles
- Design Updates
- Test Updates
- Release Updates
- API Shutdown
 - Place Code in Public Domain
 - Open Source the Interface
 - Recoverable Data
 - Mark the API 410 Gone (w/ a pointer)

Modifying APIs

- Update Principles
 - First, Do no harm
- Design Updates
 - No breaking changes
- Test Updates
 - Use all the old tests
- Release Updates
 - Favor Side-by-Side Releases
- API Shutdown
 - Responsible shutdowns

So....

Raw Blame History

Company Story at BigCo, Inc.

Purpose
We keep track of companies for BigCo, Inc.

Data
Data we include in a company record include telephone, and email. Each record has a start date the record was created and the last date/time it was updated.

Actions
Typical work on the company records include adding, updating, and deleting records. You can also update the record for filtering by status, by country, by state, and by province.

Processing
Each company has a unique identifier in the system. The name and date the company was added to the system result in a unique identifier in the system.

And, don't forget ...

What is API-First?

*"API-first design means **identifying** and/or defining key actors and personas, **determining** what those actors and personas expect to be able to do with **APIs**"*

-- Kas Thomas, 2009
